**RE: Evape Quest Nicotine Inaccuracies**

To Whom It May Concern,

Dvine Laboratories Inc is honoured to be partnered with EvapeLiquid in developing and producing the world-class, high-quality Quest products. Throughout our relationship, Dvine has worked closely with the Quest team to ensure that our production practices are a complete mesh with EvapeLiquid's demands for the highest quality management standards achievable.

Thorough testing of this line was completed before launching to the market, labelling development met and surpassed CCCR:2001 requirements, validated flavouring ingredients from Flavour Art were exclusively used in the blends, and the final step was implementation of a new blending process to ensure unparalleled consistency and accuracy. Dvine has made numerous improvements to cater to the unique requirements for this line and we appreciate EvapeLiquid for helping to work with us on these modifications.

The eliquids that were submitted to Enthalpy Analytical on May 24, 2016 as part of the bi-annual Electronic Cigarette Trade Association (ECTA) of Canada's testing protocol, were produced in April 2016 prior to the implementation of our new blending process. All eliquids produced after May 1, 2016 adhere to the following process:

- 1) ONLY NicSelect mixing base is used in Dvine Labs production
- 2) ALL nicotine is measured with volume-accurate systems
- 3) ALL batches are mixed with a proprietary blending process to ensure consistency

We appreciate EvapeLiquid's willingness to work with us as these revised processes were implemented. The stringent protocols that they have placed on Quest Eliquid's quality is setting the standard for our international vaping industry going forward.

Warm Regards,

Mike, Danielle, Joel, and the Dvine Family
